

Retroviral Testing
and
Quality Assurance
Essentials for Laboratory Diagnosis

Niel T. Constantine

Rebecca D. Saville Elizabeth M. Dax

A non-profit effort supported through an educational grant from MedMira Laboratories

FEATURES

- Affordable – only \$12 plus s/h
- Over 700 pages with greater than 100 illustrations
- 32 Chapters, including:
 - Background Virology
 - Test principles
 - Test configurations
 - Testing strategies
 - Test Interpretations
 - Rapid tests
 - Oral fluid and urine tests
 - Detuned tests
 - Molecular assays
 - Viral load testing
 - Resistance testing
 - CD4 tests
 - HTLV testing
 - Evaluation of tests
 - Quality Assurance
 - Quality Control
 - Quality Assessment
- Up to date list of available tests and manufacturers

AUTHORS

Niel T. Constantine, PhD, MT (ASCP)

Professor of Pathology
University of Maryland School of Medicine
Division Director of Clinical Immunology

Rebecca D. Saville, Pharm D, MS, MT (ASCP)

US Food and Drug Administration

Elizabeth M. Dax, AM, MD, BS, PhD

Director National Serology Reference Laboratory
(Australia)

CONTENTS (Abbreviated)

Chapter 1: The Retroviruses

Classification
Description
Importance
Transmission Modes

Chapter 2: HIV: The Viruses,

Epidemiology, Biology, and Clinical Effects
Origin of Viruses
Classification
HIV Types
HIV-1 Groups
HIV-1 Group M and Clades
HIV-1 Group O and Group N and Clades
HIV-1 Strains, Quasispecies, and Recombinant Viruses
HIV-2, Clades and Strains
Epidemiology
Structure
Life Cycle and Biology
Genomic Organization and Gene Products
Clinical Syndromes and Opportunistic Infections

Chapter 3: HIV Antigens, Antibody Responses, Cellular Responses, and the Viral Kinetics During HIV Infection

HIV-1 and HIV-2 Antigens
Host Immune Responses
Antibody Responses and Seroconversion
Isotypes, Titers, and HIV Antibody Profiles
Kinetic Characteristics During HIV Infection
Cellular Responses
Role of Cellular Immune Components during Infection;
Cells: T and B Lymphocytes, T-cell Subsets, and Macrophages;
Cytokines, Chemokines, and Receptors
Clinical Correlations: Progressors and Nonprogressors

Chapter 4: Introduction to Retroviral Testing and Serologic Assays

- Purposes of Testing
- Epidemiologic Surveillance
- Testing for Diagnosis
- Monitoring Disease Progression
- Identifying Drug Resistance
- Assessing Viral Characteristics

Chapter 5: Rapid Assays

- Advantages and Uses of Rapid Tests
- Configurations and Available Methods
- Dot Blot or Flow-through Assays
- Chromatographic (Lateral Flow)
- One-Step Assays
- Agglutination Rapid Assays
- Particle-Mediated Rapid Assays

Chapter 6: Simple Assays

- Simple Agglutination Tests
- Dipstick Tests
- Simple ELISA-Type Assays

Chapter 7: Enzyme Immunoassays (EIA) and Fluorimetric Enzyme Immunoassays (FIA)

- Basic Components of EIAs
- Generations of ELISAs 1st - 4th
- HIV-2 ELISAs and Their Use
- HIV-1 Group O ELISAs

Chapter 8: General Description and Purposes of Confirmatory Assays

- Selection and Use of Confirmatory Assays
- Sensitivity and Specificity of Confirmatory Assays
- Different Types of Confirmatory Assays

Chapter 9: p24 Antigen Detection Methods

Chapter 10: Western Blots, Immunoblots, and Line Immunoassays

- Western Blots
- Line Immunoassay (LIA) and Recombinant Immunoblot Assay (RIBA)
- Interpretation of Confirmatory Tests Results
- Inconclusive Results and Their Resolution
 - False Negative Western Blots and Minimally Reactive Profiles
 - False Positive Western Blots
- HIV-2 Western Blots and Other Confirmatory Tests for HIV-2

- HIV-1 Group O Confirmation
- Rapid Confirmatory Tests and Fast Western Blots

Chapter 11: Indirect Immunofluorescence Assay

Chapter 12: Alternative Testing Media for HIV Testing

- Whole Blood
- Oral Fluids
- Urine Samples

Chapter 13: Identifying Recent HIV Infection and Estimating Incidence: Detuning, Sensitive/Less-Sensitive Tests

Chapter 14: Vertical Transmission and Detection of HIV Infection in the Newborn

Chapter 15: Testing Algorithms

- Classical Algorithms
- Alternative Algorithms
- WHO/UNAIDS Algorithms

Chapter 16: Molecular Assays for the Diagnosis and Monitoring of HIV Infection

- Kinetics of HIV Nucleic Acid Production
- PCR: General Principle
- TMA (NASBA)
- Branched Chain DNA (bDNA)
- Ligase Chain Reaction

Chapter 17: Molecular Methods for Monitoring Viral Therapy and Drug Resistance

- Development of Drug Resistance
- Monitoring for Drug Resistance
- Phenotyping
- Genotyping
- Clinical Utility of HIV Resistance Testing

Chapter 18: Lymphocyte Phenotyping and Cellular Markers

- Methods to Quantitate T and B Lymphocytes
- Manual Methods to Quantitate T and B Lymphocytes

Chapter 19: HTLV-1 and HTLV-2 Tests

Chapter 20: Test Indices: Sensitivity, Specificity, Predictive Values, and Test Utility

Chapter 21: Evaluation of HIV Test Kits

Chapter 22: Introduction to Quality Assurance, Quality Control, and Quality Assessment

Chapter 23: Quality Assurance: Fundamentals for Quality Test Results

Standard Operating Procedure Manuals (SOP)
Record Keeping
Reports and Reporting
Transcriptional and Clerical Errors
Monitoring Environmental Conditions
Supervisory Review
Laboratory Efficiency

Chapter 24: Quality Control: Monitoring the Testing Process

Essential Components
External Controls

Chapter 25: Quality Control: Equipment Maintenance and Calibration

Chapter 26: Common Errors during Testing and Troubleshooting

Chapter 27: Quality Assessment: Monitoring Laboratory Performance

Monitoring Laboratory Staff
Proficiency Panels
Blinded Testing and Monitoring

Chapter 28: Laboratory Management Issues

Chapter 29: Regulatory Agencies (Descriptions and Contacts)

Chapter 30: Basic Laboratory Techniques

Chapter 31: Laboratory Safety

Chapter 32: Testing Under Non-Optimal Conditions

Necessary deviation from Testing Algorithms
Expired Kits - When and How They Can Be Used
Testing When Temperatures Fail
Possible Solutions When Systems Fail
Ways to Ensure that Test Results Under Sub-Optimal-Conditions are Accurate

Appendix

Cumulative List of Commercially Available Retroviral Assays
Manufacturer's Contact List

AN ABSOLUTE NECESSITY FOR:

- All medical laboratories
- Laboratory supervisors and technologists
- Educators
- Government organizations

Ordering
